

Speedbrace Ankle Brace by Ossur –

Description

The Speedbrace from OSSUR with Exoform® Technology is a hybrid between a rigid ankle stirrup and a soft ankle support. With a stirrup-shaped, plastic exoskeleton that conforms to the user's anatomy, it offers the comfort and compression of a soft ankle support with 20-35% more support than traditional stirrup supports.

Features

- Provides the compression and comfort of a soft ankle with 20-35% more protection than traditional stirrups
- Figure-8 heel lock strapping performs consistently, unlike taping that stretches over time
- Speed-laced design provides the option of a quick lace-up
- Aerospacer base material for comfort and breathability
- Embedded stirrup structure provides excellent inversion/eversion support
- Finger pull loops on heel and tongue for easier application

“A lace-up ankle brace like the Speedbrace has been proven to reduce the risk of ankle injuries.”

-Professor Wayne Derman
is Director of the Institute for Sport &
Exercise Medicine, Stellenbosch University,
South Africa.

- 1. Comfort shaped around your ankle for the confidence to perform-** The unique 3D moulded exoskeleton conforms to the anatomy of your own ankle so that protection of the joint is achieved without sacrificing the comfort required to perform at your best.
- 2. Precision adjustments keep you in control-** The speed-lace hooks and redesigned laces allow you to adjust the fit in a few seconds so that you have more control of the compression level provided throughout the game.
- 3. The benefits of taping without the drawbacks-** The advanced material construction of the new Figure-8 straps provide the same precision application benefits of taping, but without the drawbacks - such as 'tape-stretch' - during action. It is also proven to be highly cost effective compared to taping.
- 4. Quick and easy to adjust for control during action-** The user-friendly finger pull-loops on the Figure-8 straps are quick and easy to adjust - even during the game.
- 5. Cool and clean for repeated use-** The new and advanced material technology incorporated into the liner is highly breathable, quick-drying and it reduces odours. The newly provided washing bag allows for machine-washing so that looking after your Speedbrace during the season's action is now easier than ever.
- 6. Agility, speed and kicking accuracy-** Designed to be extremely low-profile and light so that it fits comfortably in a shoe and does not hinder performance where agility, speed or kicking accuracy is required.
- 7. The right fit for you-** Manufactured in a large selection of sizes so that you can always find the Speedbrace that fits perfectly for you.

Indications

- Recommended for ankle injury rehabilitation/mobilization for mild to moderate sprains and strains (Grade I/II)
- Prophylactic use: support for chronically weak ankles

THE DATA

It has been shown that a lace-up ankle brace reduces:

70%

of acute ankle injuries in patients who reported a previous ankle injury

57%

of acute ankle injuries in patients with no previous ankle injury

50%

of the cost versus taping measured over a typical sports season
